Professional Experience

MLOPs Engineer, Insurance Corporation of British Columbia July 2026-Present

- Build and maintain machine learning workflows on AWS, supporting model development, deployment, monitoring, and lifecycle management.
- Develop generative AI solutions on AWS, integrating foundation models into secure, scalable applications and workflows.
- Build data ingestion pipelines to prepare and integrate data for ML and generative AI solutions.

Data Analyst, City of Vancouver Oct 2024-Sept 2025

- Designed and deployed end-to-end ETL pipelines and analytical solutions using Python, SQL, and Microsoft Fabric, ingesting and integrating 5+ disparate operational data sources to enable automated reporting, real-time KPI monitoring, and improved data accessibility, reducing manual reporting effort by 40%.
- Developed predictive models and interactive dashboards to support performance analysis and operational monitoring, enabling stakeholders to identify trends, optimize workflows, and make data-driven strategic decisions across the department.

Data & Analytics Consultant, PriceWaterhouseCoopers Nov 2021-Mar 2024

- Delivered end-to-end data transformation, data integration and analytics solutions using Databricks, Python, and Power BI for public and private sector clients, contributing across the data science lifecycle including data ingestion, transformation, exploratory analysis, visualization, and stakeholder reporting.
- Collaborated with clients and cross-functional teams to gather data requirements, perform data discovery and profiling, and translate business problems into technical data workflows, delivering actionable insights on operational performance and process efficiency.

Data Engineer, Insurance Australia Group (Secondment) Aug 2022-Mar 2024

- Contributed to a large-scale pricing engine implementation by developing Python-based data processing pipelines to ingest, clean, and transform millions of insurance policy and claims records, improving pricing model accuracy and processing performance by 25%.
- Built and maintained CI/CD automation workflows, integration test pipelines, and API validation processes, enhancing deployment reliability, reducing production defects by 30%, and supporting the deployment of pricing models to production.

Systems Engineer, Lancom Technology Mar 2021-Nov 2021

- Provided Tier 1 and Tier 2 technical support for clients across diverse industries, ensuring 99%+ network uptime and stable infrastructure performance across

on-premises and cloud environments (AWS, Azure) through proactive monitoring, system optimization, and disaster recovery management.

Education

University of British Columbia — Vancouver, Canada
Masters of Data Science — 2026

University of Auckland — Auckland, New Zealand
Bachelor of Science, Major in Computer Science — 2020
Bachelor of Commerce, Major in Accounting & Finance — 2020

Additional Information

- Volunteer: Data for Good, Vancouver
- Technical skills: Python, Power BI/Microsoft Fabric, Databricks, Git, CI/CD (Docker, Kubernetes), Postman, Microsoft Power Platform, Atlassian suite, AWS (SageMaker/ Bedrock), Azure
- Statistics: A/B testing, Casual inference, Statistical modelling
- Data Science libraries: Pandas, Polars, NumPy, Scikit-learn, PySpark
